ABOUT

I am an AI & Data Science engineering student with a strong foundation in AI model development. I enjoy building end-to-end intelligent systems, experimenting with advanced algorithms, and exploring emerging technologies in the AI ecosystem

EXPERIENCE

WG Tech Solutions Pvt. Ltd – (Stipend Intern)

AI model training Engineer

📅 May 2025 - November 2025

- Handled data collection, preprocessing, and labeling for model training.
- Trained, fine-tuned, and evaluated AI models to enhance accuracy.
- Supported real-time AI project workflows as part of the internship team

SKILLS

- **Core AI & ML Skills:** AI model fine-tuning , AI model training
- **Programming Languages:** Python , c++ , Java script
- **Libraries:** TensorFlow , Keras , Scikit-Learn , Pandas , Flask , FastAPI

ACHIEVEMENTS

- Solved 50+ problems on LeetCode – Global Rank 1,931,451
- GitHub: 912+ commits showcasing continuous learning & project contributions

COMPETITIONS

- Participated in Kaggle – OpenAI + Amazon Write-Up Challenge
- 36-hour Hackathon at Karur Kumarasamy College of Engineering
- Quantahon 2.0 X IBM Qiskit offline in (SRM chennai) , organized by SRM University!
- Hackathon - HackZion V.1 at AMC Engineering College, Bengaluru

EDUCATION

Nadar Saraswathi College of Engineering and Technology / BTech - AI& DS .

Theni, Tamil Nadu, India **7.8 (up to 6th semester)**

📅 2022 - 2026

PROJECTS

Safety-gear - PPE Detection (YOLO)

- A YOLO-based Safety-Gear PPE Detection system that identifies helmets, vests, gloves, and other protective equipment in images and videos.
- Includes scripts for local video inference, Google Colab webcam detection, and video-to-frame conversion, making it usable across different environments.
- Provides sample JSON output generated from inference results.

Links : [GitHub](#)

Retail-monitoring

- Scripts for running YOLO-based real-time object detection on images, videos, and live feeds.
- Includes basic retail analytics like customer IN/OUT counting and simple theft detection.
- Displays model output using a front-flash visual interface with live bounding boxes and alerts.

Links : [GitHub](#)

Mushroom health prediction

- Trained two classification models (Button Mushroom & Oyster Mushroom) using labeled healthy/diseased datasets.
- Built an inference pipeline that predicts mushroom health status from uploaded images.
- Displays prediction results with a front-flash UI showing whether the mushroom is healthy or diseased.

Links : [GitHub](#)

PyLab (PyLearn)

- Lightweight interactive Python learning platform with lessons, quizzes, coding challenges, and an in-browser Pyodide runner.
- Built with a Vite + React frontend and an Express + MySQL backend to manage user progress and content.
